

# Importing the Arturia Presets

To import all of the Arturia V Collection presets in the Synth Sounds Collection you will need **Arturia Analog Lab V**. The single bank lets you import all the presets in one go, rather than twelve banks individually.

To import the presets, open Analog Lab V and open the main menu using the '≡' symbol at the top-left. Choose **Import** and navigate to the **Analog Lab V\_Bank\_RM-Synth Sounds.labx** file in the download. The import might take a while so let it do its thing. Once the import is complete the presets will be available from the "RM-Synth Sounds" bank, including in the individual plugins.

Arturia presets aren't backwards compatible so unfortunately, the .labx file can't be opened in Analog Lab 4. If you have any issues importing the presets then make sure your Arturia plugins are up-to-date by running the Arturia Software Center updater.

## Bank Icons

To set up the custom Bank icons, copy or move the .PNG image files from the included Bank Icons folder to the following folder location:

MacOS: *LibraryArturiaSharedimagesvc8\_imagespacks/*

Windows: *Program DataArturiaSharedimagesvc8\_imagespacks/*
